

Tyres are a major headache when they go wrong.

How do you ensure your tyres are not going to let you down?

TyreSafe Australia delivers a tyre pressure monitoring system (TPMS) to constantly check your tyres inflation pressures providing alerts if a tyre pressure falls, or if the tyre is getting too hot.

Improve the vehicle performance and safety. Stay relaxed and informed about your tyres!

Driving off road
should be enjoyable...

Don't **ASSuMe**
your tyres are "ok"!

Your tyres are critical to the safety of
your vehicle & passengers.
PressurePro will alert you well before
any safety issues arise.
Checking your tyre pressures is as
easy as pushing a button.

The PressurePro advantage

PressurePro Tyre Pressure Monitoring Systems (TPMS) offer many advantages:

- improved safety and dynamic handling, better traction
- lower fuel consumption as a result of lower rolling resistance
- improved tyre performance, increased life, reduced fatigue
- identifies tyre problems before they become a safety issue

The PressurePro system:

- is simple to fit, program and maintain
- fits onto the end of the valve stem
- weighs 17 grams, about the weight of a 50 cent piece
- checks the pressure every 7 seconds
- has alerts you can set, change reference pressure on screen
- uses audio visual alarms that will alert you to a tyre problem before it develops into trouble

PressurePro
Tyre Pressure Monitoring

increased life
enhance safety

control risk and avoid emergencies

A tyre running at 10% below its specified pressure:

- will wear at a 10% faster rate,
- will increase rolling resistance so fuel consumption rises
- braking is affected increasing stopping distances,
- contact pressure is reduced 10%.

Safety is compromised!

At 20% under set pressure the tyre will wear 25% faster than at the correct pressure, the danger of a tyre failure increases exponentially, the risk of a safety related incident increases. The tyre may fail catastrophically!

The monitor inside the car receives and collates the signals from the PressurePro sensors fitted to the vehicle as well as from the caravan or trailer.

The pressure from each tyre is checked every 7 seconds; a major change in pressure triggers the monitor displaying the pressure. In the event of a low or high pressure an alert will be generated, the audio/visual alert indicates your attention is required.

A second alert indicates your safety may be at risk.

This calls for immediate action to maintain safe operation of the vehicle.

can you tell the difference between these two tyres?

100% of recommended
inflation pressure

80% of recommended
inflation pressure

protect more than just your tyres

Tyre pressures are critical for stability of a caravan or trailer, one tyre down in pressure will result in the trailer steering the vehicle, increasing fatigue, tyre wear and fuel consumption, jeopardising the safety of your vehicle and passengers.

PressurePro TPMS monitors pressures in real time alerting you before problems arise.

In the event of a tyre deflating unexpectedly the warning provided by PressurePro TPMS will more than likely save the tyre from destroying itself and possibly the the whole vehicle.

- The PressurePro sensors are compatible with all wheels and tyres, no modifications necessary
- Problems with leaking wheels/rims are identified before the tyres are lost but most importantly so that you can take measures to ensure the safety of your family from a catastrophic failure
- Return on investment is increased safety, decreased fuel consumption and increased tyre life. The investment is a tiny percentage of the cost of your caravan, keep your investment safe
- Each system is customised to meet the exact requirements of your operations, no generic fits all systems. TyreSafe Australia provide all installation instructions, kits can be supplied in a pre programmed state so all you do is screw the sensors onto the tyres, connect the power and you are ready to go
- Each unit carries a no question 12 month warranty, no questions quickly replaced to maintain safety. The sensors have an expected life of 3+ years
- TyreSafe Australia provides service and support countrywide, contact us to find out how quickly you can be safer and more relaxed.
